

CARE INFORMATION FOR GLOSSY SURFACES

Regardless of the material – mustn't use aggressive detergents for care.

The aggressive detergents include a composition which has high content acids, detergents possessing abrasive qualities. We do not recommend the use of detergents on the base of solvents and the use of steam machines.

Also should refrain from use of any abrasive cleaners, tools, furniture polish, floor wax, cellulose and synthetic resins, acetone or similar detergents.

Do not use metallic or household sponges!

Avoid the use of abrasive wipes, which also include ordinary kitchen sponge, the back of which can lead to scratches on the facade surfaces.

To prevent damage to the surface, remove the protective film only after installation of the facade!

It's forbidden to wipe the facade within 24 hours after removing the protective film with any materials!

Facade should be cleaned with a 1% soap solution or window cleaner with the following care with the help of a microfiber cloth.

Stains especially strongly coloring substances, liquid, spray oil, and other like that shall be immediately flushed with plenty of water with added detergents without abrasive qualities. In the completion soap residue rinse with warm water and rub the surface with the help of the suede.

Stains should not dry out. It is possible that old stains cannot be removed completely.

Not amenable to cleaning stains can be handle with care detergents for plastic or glass. We recommend you first to test in an inconspicuous place.
